Endura-Veyor, Inc. provides custom parcel infeed solutions that set you up for maximum efficiency at the very start of your operation. Our team of specialists is dedicated to creating a user-friendly, agile, ergonomic process to unload and transport inbound parcels, packages, and goods.

Our equipment and versatile systems initiate singulation, control product flow, reduce labor dependency, and accelerate productivity.

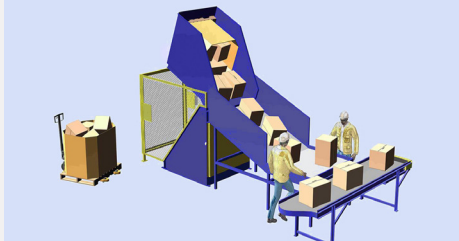

- ✓ IMPROVE ERGONOMICS
- ✓ CONTROL PRODUCT FLOW
- ✓ REDUCE LABOR DEPENDENCY
- ✓ INITIATE SINGULATION
- ✓ ACCELERATE PRODUCTIVITY

Parcel Infeed Systems

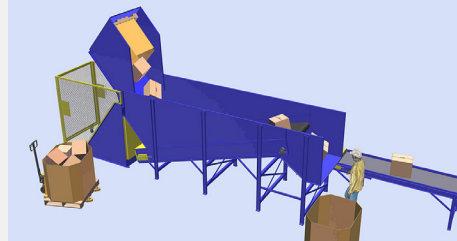

Moderate to High Volume Infeed

Basic Infeed

Integrates seamlessly to enhance semi and automated systems. Parcels unload and accumulate for manual or robotic orientation and assignment.

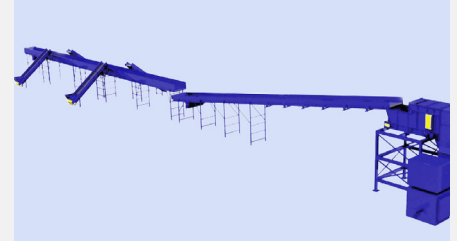

High Volume Infeed

Without interrupting downstream processing, the buffering zone allows for continuous unloading of parcels while metering the flow for pre-singulation.

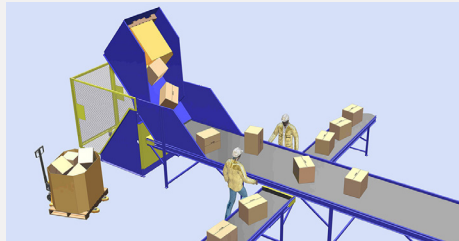

Packaging Waste

Empty Box Removal

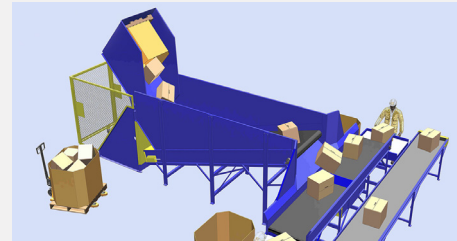

Automate removal, transportation and compaction of empty boxes to mitigate crowding and accumulation. Manage waste from pick & pack, repackaging, and returns.

Multi-Line Sortation

Assign incoming parcels and packages to multiple lines for sorting based on destination, priority, size, and more.

Split Stream Sortation

Increase throughput and processing capacity in fast-paced operations.

Application Results

Return Goods

Automating the infeed of bulk goods hastened inspection, sorting, and stocking processes. Relieving dependency on complete manual labor increased productivity.

Distribution Center

Eliminating manual transportation, compaction, and storage of accumulated cardboard boxes increased efficiency for an international food manufacturer.

E-Commerce Retail

Supplying a steady, metered flow of goods helped reduce labor dependency and increased throughput for a world-leading e-commerce retailer.

Parcel Unloaders

Hydraulic-Free Optimizer

Patent pending, hydraulic-free. Unloads parcels fast, extends the reach, and can quietly unload parcels up to 20' high within a smaller footprint.

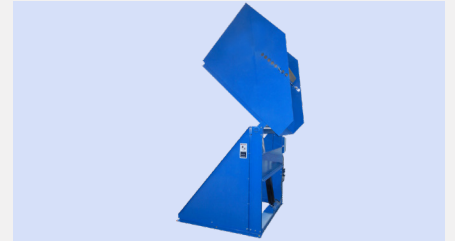

Gentler Handling & Metering

Gentler Handling

Provides gentle handling without compromising on speed or throughput. Reduces drop height and shock while extracting parcels.

Advanced Metering

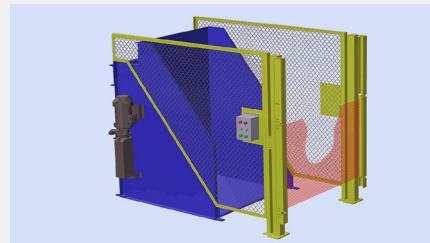

Capable of advanced metering, this unloader establishes parcel flow control and initiates singulation. Reduces likelihood of product damage.

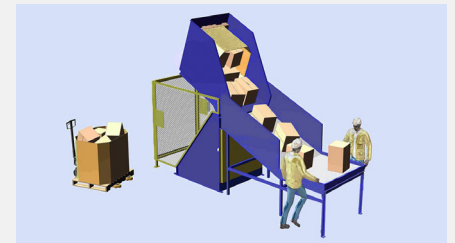

Unloading Essentials

Parcel Unloader

Reliably automate the unloading process for high volumes of parcels. Reduce labor intensity and worker strain with our built to endure unloader.

Accumulation

Ideal for operations both big and small, it integrates a chute and accumulation table for optimized manual sorting and line assignment.

Benefits

High Volume Management
Manage the most volume-intensive part of the process with confidence. Our unloaders are designed to bulk transfer heavy containers of various parcels at infeed without fatigue.

Continuous Parcel Flow
Continuously feed a steady, reliable flow of parcels to keep the processing pace consistent for conveyor and sort systems to operate at full capacity.

Increase Throughput
Rapidly transfer parcels to conveyor and sort systems. Maximize throughput and processing rates through fluctuations in volume without compromising on speed.
